

Take 5 • Botanical — print proof (GX5050, 250 gsm uncoated)

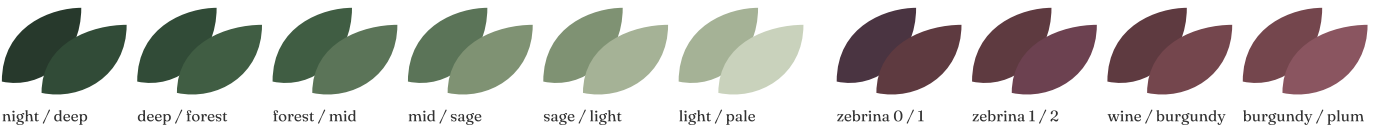

Rear tray, one sheet at a time • 100% / Actual size • Prevent paper abrasion ON. Print once per paper-type setting, tick it below, dry 10 min, judge. Then print deck sheet 1 on the same setting: cut one card, try it in a 66 × 91 mm sleeve.

1 Line weights (mm) — thinnest line that stays clean and unbroken

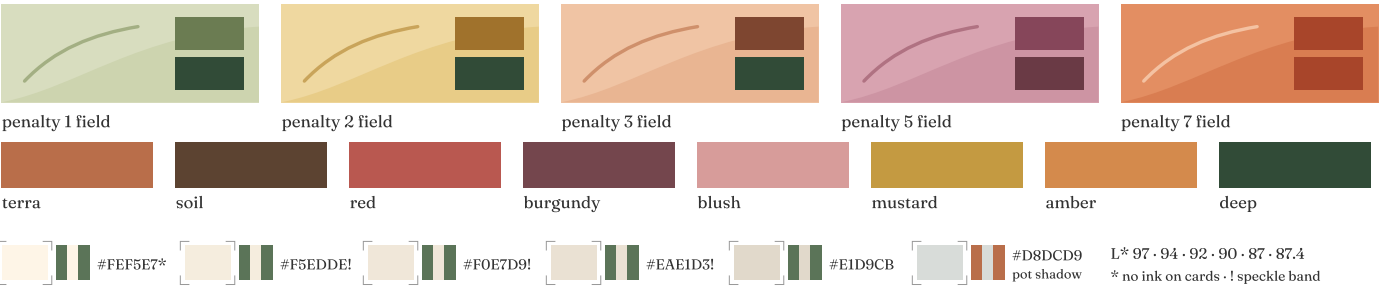

The artwork uses ≥ 0.15 mm for dark lines and ≥ 0.20 mm for light-on-dark lines.

2 Leaf tone steps — each pair must still read as two different tones

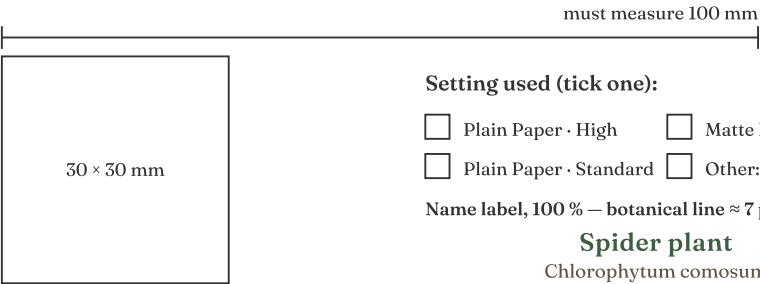

If a pair merges (most likely night/deep, deep/forest or the two darkest burgundies), note which — the darks can be lifted.
Burgundies: Tradescantia leaf bands (tiers 0|1, 1|2) and the oxalis / tradescantia leaf ramp (wine|burgundy, burgundy|plum).

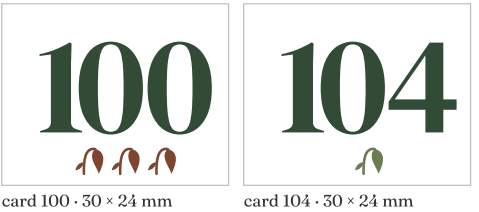

3 Flat colour — look for banding or grain; dry-rub the solids; near-white tints (bottom row)

4 Scale

3-digit numbers, 100 % — no digit may touch

5 Neighbouring tiers — each neighbour (1|2, 2|3, 3|5, 5|55) must read as a different penalty

Top 30.5 mm of each real card (number, penalty marks, corner field), at 54 % 1|2 (sage / ochre) is the pair met most often in play.
